

RESOLUTION No. 26/01

On the Adoption of the Updated Declaration of the Rights of Humanity on the Solar System

dated "22" February 2026
Moscow

The Author,

Emphasizing the importance of sustainable exploration of outer space and space objects in the Solar System for peaceful purposes and the fulfillment of international legal obligations provided for, in particular, by the United Nations treaties on outer space,

Noting the necessity of creating a system of incentives for the participation of governmental and non-governmental legal entities and natural persons, in order to ensure the establishment of a regulatory framework at the international and national levels, and noting that some states also include national space activities of governmental bodies within the scope of regulatory control,

Taking into account the fact that the process of worldwide economic, political, cultural and religious integration and unification has led to the globalization of all humanity,

Taking into account the public statements by world leaders in February 2026, which have intensified public discourse on extraterrestrial intelligence, as well as the initiation of the process of declassifying government archives related to Unidentified Aerial Phenomena,

Taking into account the growing threat of a global nuclear conflict, which makes the unification of humanity in the face of common challenges particularly relevant,

Recommends to the United Nations, states and interested legal entities and individuals to consider and adopt the updated Declaration of the Rights of Humanity on the Solar System of February 22, 2026 as a basis for the further development of space law,

Declares the following:

1. To adopt the updated Declaration of the Rights of Humanity on the Solar System from the moment of signing this Resolution.

2. To establish that the provisions of the Declaration apply to the entire Solar System regardless of whether other life forms or evidence of the activities of extraterrestrial civilizations are discovered within its boundaries.
3. All actors in international relations shall be guided by the updated Declaration of the Rights of Humanity on the Solar System of 22.02.2026 and other international acts of the United Nations on the regulation of activities in outer space.
4. To address the Secretary-General of the United Nations with a proposal to convene an emergency session of the General Assembly to discuss issues related to the declassification of UFO archives and to develop a unified strategy for humanity in the event of establishing official contact with extraterrestrial civilizations.
5. To propose to the United Nations Office for Outer Space Affairs (UNOOSA) to establish a temporary working group to analyze declassified materials and prepare recommendations for Member States.

Done and signed in the city of Moscow, on the twenty-second day of February, two thousand twenty-six.
